

Recovered from COVID-19? *We need your help.*

Convalescent plasma is currently being used as a potential treatment for COVID-19, as some data indicates patients with COVID-19 might be able to fight off the virus by receiving antibodies from patients who have recovered from COVID-19.

We are in need of donor plasma from patients:

OR

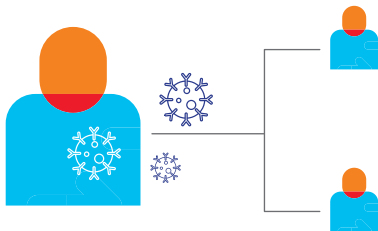

AND

Who have **tested positive** and **recovered** from COVID-19

Received a **positive COVID-19 antibody test**

Have been **symptom-free** for at least **14 days**

The patients who have **recovered** from COVID-19 are thought to have developed **antibodies** to COVID-19 that might help sick patients combat their COVID-19 infection. Each unit donated has the potential to **help at least two patients** who are currently hospitalized with COVID-19.

For more information, please contact Marsh Regional Blood Center at **423.408.7500**.
